throughout the yeaire. 68

## The Contents.

|                                                                                                                                                                          |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A rule to know how many daies every moneth hath.                                                                                                                         | 59  |
| Certaine tables to know the ebs and floods, for<br>most ports and haunes in England enlarged.                                                                            | 69  |
| A rule to know by heart, what member is govern-<br>ed by any of the 12 signes.                                                                                           | 70  |
| A Table to shew what signe the Moone is in, and<br>shall bee for ever, also what part of mans bodie the<br>signe doth rule, and what infirmitie are incident<br>thereto. | 76  |
| An easie way to knowe what signe the Moone is<br>in, and to sayng her day.                                                                                               | 77  |
| Certaine elections that are to bee chosen by the<br>course of the Moone.                                                                                                 | 79  |
| Certaine tables that shew the rising and setting<br>of the sunne, the length of the day and night, astro-<br>ciall, &c.                                                  | 80  |
| A table to know what planet rules every houre ei-<br>ther by day or night.                                                                                               | 83  |
| A Table to knowe the length of the planetary<br>houres.                                                                                                                  | 86  |
| A figure shewing the same more easie and readier<br>without tediousnesse.                                                                                                | 88  |
| The properties & inclinations of the planets.                                                                                                                            | 90  |
| The names of all the Colledges and halls, in both<br>universities Oxford and Cambridge.                                                                                  | 95  |
| The shires, cities and borroughs, that haue place in<br>the parliaments, with all the party Churches con-<br>taigned in each shire.                                      | 99  |
| The names of all the Bishopricks in England<br>and Wales.                                                                                                                | 101 |
| The names of the Wardes and parishes in Lon-<br>don.                                                                                                                     | 105 |
| All the principall Faires in England.                                                                                                                                    | 107 |
| All the faires of Wales never before printed.                                                                                                                            | 111 |
| The highwayes from one towne to another<br>wherever hath heene her etosome let forth.                                                                                    | 113 |

A perfect rule to knowe the Lawe daies  
in the Court of Arches, the audience of Can-  
terbury, and the spirituall and Civil  
lawes throughout the yeare.

### Michaellmas Termme.

S.Luke. All Saintes. S.Andrew.  
S.Simon & Jude. S.Martine. The conception  
S.Faith. Edmond K. of our Lady.  
S.Edward. S.Katherine.

Ye must well understand that the first day ensu-  
ing each of the feasts set down before every Termme  
the court of the Arches is kept in the forenoone at  
Sowe Church: and in the afternoone the same  
day, is kept in Southwarke the Admiral court  
by circuill causes.

The second day after each of these feasts, the Au-  
dience court of Canterbury, is held in the Consisto-  
rie in Paues in the forenoone, and the prerogative  
court of Canterbury is kept in the same place in  
the afternoone the same day.

The thrid day following any of those feasts, the  
Bishop of Londons Court of Consistorie is holden  
in paules in the forenoone, and in the same place is  
the court of the Kings highnesse commissioners  
upon appeals, and the Court of Deligates holden  
in the afternoone the same third day.

### Hillary Termme.

S.Hillary. S.Scolastice. S.Chadde.  
S.Wolstane. S.Valentine Pesp.& Feli.  
Convent.of Paul. Ashwednesday. S.Gregory,  
A.Blase. S.Mathias. An.of our la.

## Lawe dayes.

Understand that the four first feasts of this Terme be never changed, but are certaine, the other are sometime kept, and sometime omitted, after the course of the yeare altered. And if it so chance, that one of those feasts be Ashwednesday, that are after Saint Blasē day, so that the same lawday after Ashwednesday cannot be kept, because the Lawday of the other feast doth light on the same day: the second lawe day after Ashwednesday shall be kept, and the other omitted.

And if the lawday after Ashwednesday, be the next day after S. Blasē, than shall all and every of those dayes be obserued in order, as they may be held conueniently.

And note, that although Ashwednesday be the viij. in order, yet it hath no certaine place, but is changed as the feast of Easter causeth it.

## Easter Terme.

The xv day after Easter. Gordian.  
Saint Alphege. Saint Dunstone.  
Saint Mackē Euangelist. Ascension day.  
Inu.ntion of the Croile.

In this Terme, the first fitting is alwayes kept the Monday being the xv. day after Easter, and so after the feasts here noted, which shall next follow by course after Easter, and the like space being kept betwene other feasts, the rest of the Lawdayes are kept the third day after the Ascension, which is the last of this Terme. And if it happen that the Ascension day to come before any of those feasts aforesaid, then they are omitted for that yeare. And likewise, if any of those dayes come before the iij. day after Easter, those dayes are also omitted.

## Trinitie Termme.

|                  |             |              |
|------------------|-------------|--------------|
| Trinitie Sunday. | S. Bæculph. | S. Swithin.  |
| Corpus Christi.  | S. John.    | S. Margaret. |
| Boniface Bishop  | S. Paul.    | S. Aane.     |
| S. Barnabe.      | Tr. S. Tho. |              |

Remember that the Lawe dayes of this Termme  
are changed by the meanes of Pentecost, and the  
first sittynge is holden alwayes the first day after  
Trinitie Sunday, and the second lawe day is hol-  
den the first day after Corpus Christi day, except it  
fall on some day aboue named, which chauncech  
sometime, and then the sittynge day is kept, and after  
the second sittynge account four dayes or therabout,  
and then looke which is the next feaste, and the first  
ly day after the sayd feaste, shall be the third sittyn-  
g, the other lawe dayes follow in order, but so many  
of them are kept, as for the time of the yeare is  
thought meete.

Note generally, that every day is called a lawe  
day, that is not Sunday or holiday, and that if the  
sayd daye being knowyne of any Court daye in any  
Termme, and the first or second daye following bee  
Sunday, then the Court daye is kept after the sayd  
holiday or feaste daye.

Fyrst of all, these dayes are not altered, except  
they light on Sunday, or some Holyday, and every  
daye is called a Lawe daye, unlesse it be Sunday or  
Holyday.

A necessary and p[er]fect rule to know when  
the Termes begin and end: and how many  
returnes are in every Term[e].

Eight dayes before any Term[e] he,  
The Exchequer openeth for certainte:  
Except the Term[e] of Trinitie:  
That openeth but fourte dayes before it selfe.

Whiche Term[e] beginneth the 23. of January,  
it is Bee or Sunday, then the next day after, and  
endeth the 12. of Februarie.

Ottobre Hilari. Craftino Purificacionis.  
Quind Hilari. Octabss Purificacionis.

Other Term[e] beginneth ev[er] dates after Easter,  
And endeth 4. dayes after Ascension day.

Quin. alia. Mense. Quinque Paschae.  
Tres Paschae. Pasch. Craft. Ascension.

Trinity Term[e] beginneth the next day after Corpus Christi day, & endeth the wednes day forenight after. Note that Corpus Christi day is always the Thursday after Trinity Sunday.

Craft. Trinitatis. Quind. Trinitatis.  
Ottab. Trinitatis. Tres Trinitatis.

S. Michaelmas Term[e] beginneth the midde of October, if it be not Sunday, and endeth the tweny and eight day of Novembre.

Ottab. Michael. Craft. Apocalypsis.  
Quind. Michael. Craft. Martini.  
Tres Michael. Ottab. Martini.  
Mensi Michael. Quind. Martini.

In this Callender following. you shal somtyme finde these letters B. and E. The which signifie such dayes as the Egypcians note to bee dangerous to begin or take any thing in hand, as to make a journey, or any such thing.

Warme weales this moneth conuenient be,  
white wine also as whollome is:  
The fleshly sweete drinke he ruleth by me,  
bleede not, but ha ha, forget not his.

March hath 31. dayes.  
The Moone 3c.

II

March in mans body breedes humors great:  
And diuers colours that dangerous be:  
Then giue good heede to that yee shall eate,  
Bei bleede and bathe with modeſtie.

Aprill hath 30 dayes.

The Moone 29.

his month all things their strength renue.  
 the pores are open, and blood abounds:  
 By letting blood yee shall not rue:  
 of purging also no harme reboundes.

The Moone 29.

In June abstaine from drinke's new and sweet,  
 Be merry and recreate your selfe withall,  
 Use holosome hearbs, for so is it meete,  
 But take no medicines whatsoeuer besall.

|    | II |   |             |                     |    |  |

This moneth are required meates that are colde,  
 The Riuers are holesome, but bathes be not so;  
 Bleede not, nor purge not, for so wisome wold,  
 Abstaine from Venus, let that delight go.

The Moone 30.

In August sleepe little; as little as pée may.

Fast and sweare meate as much vs you can:  
 To take no medicine it is best they say:  
 Purge not vs bleed not but be content than,

October hath 31. dayes.

The Moone 30.

Octobre bids you to prepare a space,  
To wear clothes to keepe your badies from colde,  
Good certeine exercise you may in brace,  
Wistag loz drinke Wine holde me and cold.

# An Instruction for the perfect vnderstanding of the manner and order of the computati- on, and other Tables here- after following.

He order of this Booke, and  
the matters therin contained,  
are as followeth.

First, herein is a perfect rule  
to know the beginning and  
ending of the Termes, both  
of the Ciuitall Law, and the  
common Law.

Then followeth a Kalender,  
wherein are obserued the old saintes dayes, not of su-  
perition, as though euery of them mentioned in the  
said Kalender were a Saint, ( for of some is knowne  
the contrary : neyther if they were all Saints, are  
they therefore placed in this Kalender,) but because  
it hath bee ne a custome of auncient time to vse their  
names, in signifying and making certaine the dayes,  
times, and Tearmes of the yeare, as by the dating  
of diuers olde Deedes, Evidences and Recordes  
will appeare. And because the same custome is yet  
remaining in the returning of wittes and processses,  
and also is commonly vsed in the noting and seeting  
forth of the principall fayres and markets and all the  
festions of the yeare, those names serue well for thy  
purpose, and therefore might not conueniently haue  
been left out. And unto the said Kalender are added  
the Calends, Nones, and Ides, because diuers Evi-  
dences are dated on those daies & by those words, and  
henceunto also are added, the vigis & festiuall dayes,  
more.

moreouer, the very degré & signe that the sunnes in  
every day of the yeare, according vnto his middle mo-  
wing truly suppitated, so that having this booke,  
there shall be no occasion to call for any other Calen-  
dar.

Then beginneth the Computation of yeares,  
wherein is to be noted, that every page thereof is di-  
vided into 7. severall columnnes or places as may ap-  
peare by the titles ouer euery of their heads. In the  
first place are the yeares of our Lord: in the second  
the *P*aine: in the third the *E*pact: in the fourth the  
*D*ominicall letter, and the leape yeare, whensoeuer it  
happeth: in the fift are the names of the Kings as  
they raigned, beginning with William the Conquer-  
or, &c. And in the same place also are the moneths  
that every of them entred into their raignes. And in  
the sixte are the dayes of the moneths that every of  
them began to raigne in. And in the vii. and last, an  
the yeares that every of them raigned.

Also in the raignes of every King, is shewed  
the day of his death, if hee dyed beeing King, or the  
day of his deposition, if he were deposed: with a true  
account how many yeares, moneths, weekes, or dayes  
he raignend.

And heere I thinke it meete to declare somewhat  
of the commodity & necessary use of the Computation  
afore mentioned. And for the better instruction and  
understanding thereof, I will mouue certayne que-  
stions, and giue answere to the same in such sorte, as  
shall so utter the order and manner thereof (as it were  
by examples) that I doubt not, but the true and ne-  
cessary use of the same, shall plainly appeare to all men.

# The Instruction.

## 1. Question.

I would know by this computation, in the fourth  
yeare of King Edward the first, what was then the  
yeare of our Lord, the Prime, the Epact, Domini-  
call letter, and the moneth and day that he began his  
reigne in, and what day in the weeke the same was.

## Answere.

Among the Kings, in the Computation following,  
sette out for King Edward the first, and then looke  
for the 4. yeare of his reigne, & there it appeareth to be  
the yeare of the Lord 1275. the prime 3. the Epact 3.  
the Dominicall letter F. the moneth that he beganne  
his reigne in November, and the 16. day, which daye  
that yea<sup>e</sup> was Saturday, as is easie to be knowne if  
you looke in the Kalender for the 16. day of Novem-  
ber, accounting F. for sunday, then that day must  
needs be saturday, and so of all other the like.

## 2. Question.

In Evidence dated the 15. Kalends of December  
in the 3. yeare of R. John, I would know what day of  
the month the same was, & how long it is since.

## Answere.

First looke in the Kalender in the moneth of  
November for the Calends of December, and there  
you

## The Instruction.

you shall finde the xxv. Calends of December is on the xvii. day of Nouember Then seeke in the Computation for R. John, and you shall finde that the third yeere of his raigne wa: in the yeere of our Lord 1201. And then set downe this yeere of our Lord, wherein the question is asked, which is 1571. & take out therof 1201. and there rests 370. And so it must follow that vpon the xviii. day of Nouember next, it shalbe sithen the third yeare of R. John 370. yeares, and thus of the like.

## 3. Question.

An Evidence dated the second Sunday in Lent, in the forth yeare of King Stephen, I would know in what yeare of our Lord the same was, and also in what moneth, and on what day the second Sunday in Lent was then.

## Answeare.

If first looke among the Kinges for King Stephen, and when yee haue found him, then looke for the 4. yeare of his raigne, there you shall finde the year of our Lord to bee 1138. and the prime 18. and v. the Sundayes letter. Then goe to the Table that teacheth to knowe Easter day, and all the moneable Feasts, which Table you shall finde in the 64.page.

And there vnder the Title of the Prime, seeke among these numbers for 18. When you haue found it, looke downward from the line where the prime standeth, and seeke for the next v. which that yeare was the Sundaye letter. And when you haue found v. goe forward in the line and there you shall find the 20. day of February to be that

pure the first Sunday in Lent, and theremto put  
seven dayes for one weeke more, and that sheweth  
that the second Sunday in Lent, that yeare, was  
the 27. of Februarie. Then set downe this  
present yeare of our Lord 1571. and take out ther-  
of the yeare of our Lord that was then, which was  
1128. and there resteth 433. And so it deth plainly  
appere, that the 27. day of Februarie next com-  
ming, it shall be 433. yeares sith the fourth yeare  
of the raigne of King Stephen. And thus you may  
do with the like.

#### 4. Question.

I haue a lease for lexx. yeares that began at Mi-  
chaelmas in the xvii. yeare of King Henry the 7.  
my desire is to know this present yeare 1571. whe-  
ther my lease be expired, or how many years I haue  
to come.

#### Answer.

First in the computation, looke among the Kings  
for King Henry the 7. and then for the 17. yeare of  
his raigne, which you shall finde to be in the yeare of  
our Lord 1501. The which number take out of this  
present yeare of our lord 1571. and then resteth 70,  
and so many yeares of the said lease shall be expired  
at Michaelmas next, then shall remaine x. yeares to  
come, and so of the like.

#### 5. Another question and plaine example, meete for such as cannot extract one num- ber out of another.

A lease dated the 6. of July, in the 31. yeare  
of the raigne of King Henry the 8. for the terme

of ylyeres, that began at our Ladys day in Lent then next following: I would now know whether the said lease be expired, or how many yeates there ar to come.

## Answer.

First looke in the Computation among the Kings for King Henry the eight, and the 31. yeare of his raigne, which you shall finde to be in the yeare of our lord 1539. Then at the next yeare following begin to reckon and call that one, and so tell downe in order all the yeares following, and end with this present yeare 1571. And the whole, you shall finde the number of 32. And so many yeares of the sayd lease shall be expired at our Lady day in Lent next comming. And at that time there shall remaine to come of the sayd lease, iiii. yeares: and thus you may account the yeares of any lease.

Another very plaine question or example, easie for all men to conceiue, and in this tyme is commenly vsed.

A lease dated the 17. day of August, in the 5. year of the raigne of King Edward the 6. for the term of xiij. yeares, which began at Michaelmasse then next following. I aske the question this xij. day of August 1571. whether the sayd lease be expired, or how many yeares are yet to come.

## Answer.

First in the Computation among the Kings stede for King Edward the vi. and for the first yeare of his raigne, and there you shall finde the year

yeare of our Lord to be 1550. Then begin at the  
ixi. yeare after, which is 1551. and call that one,  
to so tell downeward all the yeares, to this present  
yeare 1571. and in the whole you shall finde xxxi.  
which plainely declareth, that at Michaelmas next  
the abovesaid terme of xxxi. yeares shall be fully ex-  
piled. And this you may doe in the account of all  
names of yeares.

Note also, that in the sayde Computation dis-  
use of the Kings haue in the first yeare of their  
rigne, no yeare of our Lord. The cause is that they  
began in the same yeare that the former King dyed  
in. And therefore when you tell the yeares, doe not  
menthem that haue no yeare of our Lord.

Note also that the yeare of our Lord after the  
Computation of the church of England, beginneth  
after the xv. of March, which is the day of the An-  
nunciation of our Lady.

Note also, that when you account any Terme  
bytates, that the same terme that your Lease first  
began in, must end and finishe in the last yeare of  
your reckoning at the selfe same terme. And if your  
lease began at Michaelmasse, for xxxi. yeares, then it  
must needes end at Michaelmas the same yeare  
that the whole xxxi. yeares are expired in, and if at  
Midsummer, then it must end at Midsummer the  
same yeare. As the last question and example dooth  
plainly shew.

And this I trust may suffice for the instruc-  
tion of the vse, order, and commoditie of the sayde  
Computation.

Note that throughout this Computation follow-  
ing you must recken but 28. dayes to every moneth.

G.

The aforesaid Queen died on Thursday the 14 of March 1602. when she had reigned 44. years, 4 moneths, and 14. dayes, by whose death the famous kingdome of England & Scotland, (which ever since the time of Brutus had bene deuided) by lawfull right and lineall descent, descending unto James the first of that name, by the grace of God King of both Kingdomes, were in his person reunited and called according unto the auncient name, Great Britaine.

Kings of Great Britaine, with the yeares, moneths, and dayes, wherein they began theiraignes.

James the first of that name, King of Great Britaine.

A declaration of these two Tables,

By the first of these two tables may be found  
 the Circle of the Sunne and Dominicallletter

ntly and perfectly for ever, any time past or any  
one to come, which Maiter Graftons rundle  
ould not do. If yee list to extend it aboue 1615. in  
the place of 1588. set 1616. and so count orderly as  
ye did at the first for any yere to come. And for a  
ny year past, doe thus, in the place of 1615. set a  
1587. and so count upward till the yere you seeke:  
and in like manner doe by the Table that serveth to  
 finde the Prime and Epact, & so are they perpetu-  
all without altering, which no rundle can performe.

Otherwise for the Circle of the Sunne and  
Hundayes Letter, adde to the yere of our Lord 9.  
and divide by 28. the rest sheweth the Circle  
of the Sunne, whereto in the Tables answers  
the letter Dominicall, as in this example, to the  
yere 1588. I adde 9. which makes 1597. which  
divided by 28. the quotient is 57. and the remaine  
is 1. which was the circle of the sunne for that yere,  
wherewith I enter the Table, and finde that S. F.  
answerteth thereto which was the Dominicall Let-  
ter for that yere being Leape yere, & so of the rest.

The Leape yere, as ye may perceine by the former  
Table changeth every fourth yere: for when you  
divide the yere of our Lord into 4. parts, then  
is Leape yere. And the Dominicall Letter is  
changed on the 24. of Februarie, as you may per-  
ceue in the Almanacke by the marginet.

### The Golden number and Epact.

The Prime or Golden number, is a number that  
beginneth with one, and increaseth yearly one, till it  
come to 19. & then beginneth againe: it is called the  
Golden number, because it was sent out of Egyp to  
the Romanes in Letters of Gold, and thus may you  
finde

Find it. To the yeare of our Lord ad 1. & deuide it by 19. the rest shewes the Golde number for that yeare, and for ease of working, ye may leau 1500. and the one which should be added, and diuide the rest, as for example, by the yeare 1588. which is more then 1500. by 88. the which I deuide by 19. and there restis 12. which is the Prime or Golden number for this yeare that present is, and the next yeare shall be 13. and so forth till 19.

For the Epact.

The Epact or concurrent is thus found: Multiply the Prime by 11. and take away 30. and the rest is the concurrent or Epact. As for example 1588. 12. is the Golden number, which multiplied by 11. makes 132. which deuided by 30. resteth 12. the Epact for this present yeare. Or thus more easilly. Yee must imagine 3. places and on the thonne most fitly, that is the roote of the thonne the first, and the middle ioynt the second, and the toppe of the thonne the third, then in the first place which is the roote of the thonne put this number 10. and in the middle ioynte of the thonne 20. and at the toppe 30. this put in memorie: by the order of these places shall be counted the Golden number. As one in the first place of roote, and two in the second or middle ioynte, and three in the third place, then so returning, set 4. on the roote or first place, 5. on the second, &c. till yee come to the Golden number for the yeare for the which you seeke, and the number of that place must bee iwyned with the Golden number of the yeare, and that that it amounts to, shall be of Epact, so that it passe not 30. but if it passe be the goe 30. and the remaine is your request. As in this example I will expresse it more plaine, In the yeare of our Lord God 1588. the Prime is 12. whiche counted by the sayde three places of

## The Instruction.

37

As thonke ends at the third, where this number 10. is placed, which both added, make 43. from which take 30. & there remayneth 12. the very Easte in this present yearre, &c And note that the Easte beginneth the first day of March, and the Domini milletter and Y; bese the 1. day of Januarie.

### To know the age of the Moone.

1650  
June 6

The Easte knowes, to know the age of the Moone, y<sup>e</sup> must haue these numbers. The first is the Easte, the second the number of the moneths from March (including both moneths) the third the daye of that moneth passed, then layne these three numbers together if they rise not to 30. so old is the Moone, if they passe 30. 30. being left as often as you can, they will be the age of the Moone, this is went by the moneths that haue 31. dayes, so; in them that haue but 30. dayes the continuall is at 29. day, and they that passe 29. (29. being substracted as oft as may) are the age as before.

### As for Example.

This yearre 1588. for the 15. of August, I would know the age of the Moone. First the Easte is 12. in the moneths from March to August are 6. and 15. the daye of the moneth, which all put together make 33. from whence take 30. and there remayneth the age of the Moone that daye.

### Another example:

For the 18. of September the Easte being 15. moneths 7. and dayes 18. added together makes 37. from thence take 30. for Septem. hath but 30. dayes, and there remayneth 7. the age of the Moone for the day, and in like manner shall we gaine to gett fully 29. dayes of the Moone.

D

MAB

And to know the day of the change, doe thus. To the Epact adde all the moneths from March, and if they ioyned together come not to 30, looke what they lacke of 30, and at so many dayes of the moneth the moone changeth. If they bee aboue 30, and the moneth of your desire haue 31 dayes, then subtract 30, but if 30 dayes, then subtract 29, and that rest taketh from 30, then looke what remaynes, and at so many dayes of the month the moone changeth.

As for example. In the yeare of our Lord 1573. the Epact is 26. and Sept. ffrom March 6. which added together make 32. from which take 29, because September hath but 30 dayes, and there rest 3. which being taken from 30 leaueth 27. vpon which day the moone changeth this yeare in September. Againe, to make it more plaine, I will proue by March that is past. The Epact is 26. which take from 30. (because March hath 31 dayes) and there resteth 4. which is the day of the change. And to know the full of opposition, adde to the change day 14. dayes 18. houres; and for the other aspects is made this Table that followeth.

|                |     |          |     |        |
|----------------|-----|----------|-----|--------|
| To the         | { * | to the   | { * | D.     |
| contingent for | { □ | full for | { □ | 4. 22. |
| the            | { Δ | the      | { Δ | 9. 10. |
| the            | { Δ | the      | { Δ | 9. 10. |

Note for certayne, that the first Tuesday every yeare after the change of the moone in February is Shrovetuesday, which being knowne you may easly finde vpon what day of the moneth an other uncountable feastes throughout the yeare do fall vpon.

A Table

# A table to know how long

the Moone shineth, and when she riseth  
and setteth.

| The age of the<br>Moone increasing. | The hours<br>she shineth. | Her age<br>decreasing. |
|-------------------------------------|---------------------------|------------------------|
| H.                                  | M.                        | Sec.                   |
| 1                                   | 0 48                      | 29                     |
| 2                                   | 1 36                      | 28                     |
| 3                                   | 2 24                      | 27                     |
| 4                                   | 3 12                      | 26                     |
| 5                                   | 4 0                       | 25                     |
| 6                                   | 4 48                      | 24                     |
| 7                                   | 5 36                      | 23                     |
| 8                                   | 6 24                      | 22                     |
| 9                                   | 7 12                      | 21                     |
| 10                                  | 8 0                       | 20                     |
| 11                                  | 8 48                      | 19                     |
| 12                                  | 9 36                      | 18                     |
| 13                                  | 10 24                     | 17                     |
| 14                                  | 11 12                     | 16                     |
| 15                                  | 12 0                      | 15                     |

The use of this Table is thus, the age of y<sup>e</sup> Moone knowne and found in the side of the Table, then answering thereunto, shall y<sup>e</sup> see the hours & minutes of her shining to be counted from the Sunne setting ; all the encreasing till the full, and till then she shineth in the evening, & after the full she shineth before the sunne doth rise in the morning so many houres before the sunne riseth, as the table sheweth. And for her rising and setting ; doe thus : all the increase adde to the houres of the Sunne rising, the houres found in the Table, & it sheweth the houre of her rising. Againe, adde to the houre of the sunne setting, the houres and minutes found in the Table, that is the houre of her setting. Then after the full, for her rising doe thus : From the Sunne rising, take the houres found in the ta-

ble, and the rest sheweth the rising, and from the houres of the Sunne setting, take the houres found in the Table, borrowing 12 if the Subtraction cannot else be made, and the rest sheweth the setting of the Moone.

All these aforesaid, by example shall  
be made manifest.

The 30. day of September 1588. I finde the  
Moone to be 21. dayes old, wherewith I enter the  
Table, the moone decreasing, & finde seven houres  
two minutes answering thereto: so I say the  
Moone shines 7. houres, 2. min. in the morning be-  
fore the sunne rise, & the sunne the same day riseth  
at 6. and 12. minutes, whereto I put 12. houres  
als could not the subtraction be made, & it makes  
18. houres 12. minutes, frō which I take 7. houres  
3. minutes, & there rests 11. houres 10. minutes be-  
fore midnight, at which instant the Moone ariseth.

### Another Example.

The 20. day of October 1588. the moone is 10.  
dayes olde, wherewith I enter the Table, the  
Moone increasing, and finde 8. houres answering  
thereto, which sheweth that the Moone shines  
eight houres in the evening after the sunne is set,  
and the sunne the same day sets at 5. of the clock  
25. minutes, whereto I put 8. the houre of the Ta-  
ble, & it makes 13. houres 15. minutes, from which  
I take 12. which is midnight, and there resteth 1.  
houre 15. minutes, which sheweth that the Moone  
shall set the same day at 1. a clock 15. minutes, after  
midnight. Likewise the same day the sunne riseth at  
6. of the clock 41. minutes, to which I add 8. and  
it makes 14. houres 41. minutes, from it I take 13.  
(so that is none) and there rests two houres 41.  
minutes, which sheweth that at 2. of the clock 41.  
minutes after noon. the Moone riseth, though to  
ys vnsorne, and so for all other times.

A Table to know the houres of the night  
by the shadow of the Moone in  
any Sunne Diall.

| D  | H. M.  | as |
|----|--------|----|
| 1  |        | 29 |
| 3  | 10. 24 | 28 |
| 3  | 9. 36  | 27 |
| 4  | 8. 48  | 26 |
| 5  | 8. 0   | 25 |
| 6  | 7. 3   | 24 |
| 7  | 6. 34  | 23 |
| 8  | 5. 36  | 22 |
| 9  | 4. 48  | 21 |
| 10 | 4. 0   | 20 |
| 11 | 3. 12  | 19 |
| 12 | 3. 4   | 18 |
| 13 | 2. 36  | 17 |
| 14 | 2. 48  | 16 |
| 15 | 2. 0   | 15 |

If you know the age of the Moone, then having a Sun Diall, set where the moone giueth shadow, and from the same take the houre & minute answering to the same, if the moone increase, and the rest sheweth the houre after midnight: but after the full, all the wane abde the same, and that shewes your deale.

Example.

The moone being 10. dayes old, and in the Diall the point set by the shadowe the 11. houre, thereto I adde 4. houres and 48. minutes, and it makes 15. houres and 48. minutes, thence I take 12, and there resteth 3. houres & 48. minutes, the sunne houres of the night.

*A rule to know the houre of  
the day, either before noone or after noone,  
by the beatnes of the Sunne, and the  
length of the Ruler, as  
followeth.*

**F**irst, y<sup>e</sup> must have a rule of thre or ffe  
fches long, which must bee divided into  
threue partes, as in the figure following,  
(which is prepared,) wher y<sup>e</sup> shall know the  
houre of the day. Set your rule or Ruler upright  
upon a plaine levell boord or ground, and take  
the full length of the shadowe, what parts of the  
rule it containeth; wherewith enter the Table  
following, and against the degree of the Sunne  
for that day, take the length of the shadowe, and in  
the head of the Table, y<sup>e</sup> shall see the houre of  
the day, eyther in the forenone or afternoon, as  
your description shall deserne, for that the Sunne  
hath his altitude at like distance from the Me-  
ridian line in the forenone ascending, and in  
the afternoon descending, if y<sup>e</sup> finde not the last  
length, take the greater number next to it in the  
forenone, and in the afternoon take the lesser next  
thereto, and each shall give you the houres past, as in  
this example.

The 23. of November, taken the Sunne in  
the 1. o. of Sagittarie, I would know what houre  
it is in the Sunne. I set up the diuided Rule, and  
the length of the shadowe is 57. partes long, whic  
h is 4. times the length of the Rule, and 9. partes  
more, which shewes that it is ten of the clocke in  
the forenone, or two of the clocke afternoon,  
whch is easily discerued.

A rule

# A rule to know, &c.

63

## Another.

The 5. of December, the Sunne being in the 23. degree of Sagittarie, I finde the shadow to be 52 parts, that is, foure times the rule, and foure over, which sought in the table against the 20. degree of Sagittarie, for it is nearest) soz so must ye always doe when the number you seeke is not precisely found) & finde not 52. but the nexte lesse is 47. and the next aboue is 52. the difference is 5. then take 47. from 52. and there rests 4. then my the rule of proportion, if I 5. give 60. (for so many minutes be in one houre) what shall 4. give, multiply the second by the third, that is 60. by 4. and the product or oſſet will be 240. which sheweth, that it is either 16. minutes before 1. in the forenoon, or 16. minutes after 1. of the clocke in the afternoon, and so of all other, which in mine opinion is the most precise Horologie that may be, though at the first it seemes somewhat harde: The Table followeth.

## A Table

| 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |
|----|----|----|---|---|---|---|---|---|---|---|---|
| 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |
| 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |
| 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |
| 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |

A Table to know the hours of the day  
the shadow of the Sunne.

| Beforenoone |    | 4  | 5    | 6   | 7   | 8   | 9  | 10 | 11 | 12 |

66 A description of the order and vse of  
the foresaid Table as  
followeth,

**F**irst note, that the sayde Table is deuided  
into sixe columnes or places. In the first is  
the Prime, in the second the Dominicall let-  
ter, in the third, the first Sunday in Lent, in the  
fourth, Easter day, in the fift, Rogation weeke,  
and in the fift Whitunday.

And for the better vnderstanding of the vse  
therof, ye must alwayes whou ye desire to know  
the time of auy of the sayd Feastes, first consider  
what yeare of our Lordis it is that ye would  
knowe them in, and then looke the Prime of that  
yeare, and the Dominicall letter, and those you  
may easly finde and leavue in the title of the Table  
for that purpose, that is before set foorth. And  
when ye knowe the Prime and Sundayes Letter,  
then come to this Table, and it will easly shewe  
you your desire.

Example.

I would knowe in the yeare of our Lord, 1588. when shall be the first Sunday in Lent. Ea-  
ster day, &c. First I goe to the Table aforesayde,  
and there in the first columne, I seeke out the yeare  
of our Lord 1588. & in the second columne directly  
against that, there I finde that yeare, the Prime  
to be twelue, and under that. the Dominicall let-  
ter is his G. If. Then I come to the absuesayde  
Table, and first vnder the Title of the Prime, I  
seeke for the number of 12. and when I haue  
found the same, then I looke downwarde among  
the Sundayes letters for the next F. that is af-  
ter the Prime, for that is the Sundayes Letter  
for

in that year: and when I haue found f. I goe forwarde in that line where f. standeth, and first I finde that the 24. day of February that year, shall be the first Sunday in Lent. The 7. day of Aprill Easter day. The 12. day of May, Rogation Sunday, and the 26. day of May, Whitsunday. And thus may you do with all other, both for time past, and time to come, for euer.

Note also that this table in the beginning, sheweth the lowest moneth & day in the yeare that Easter and all other moveable feasts do fall in, and in the end, it sheweth the highest month and day, that Easter, and the unmoveable feasts do ascend vnto: so my it be truly said, that it is a perfect table.

And yet herevnto will I adde one Rule, which although it be in old and rude wriiting, yet it is may of memory, and it is the same rule wherby this Table was made, which is thus.

In March after the first C.

I loke the Prime wher'e ever it be; +  
The third sunday after Easter day shall be  
And if the Prime on the sunday be,  
Then reckon that for one of the three.

A rule to know certaintly the  
Dogge dayes.

The Dogge dayes doe alwayes beginne the sixt of July, and end the 17. of August.

A yeare hath By the course of the sunne gitt. moneths,  
By the course of the moone gitt. moneths.  
Df twakes, fity and two, that is, 365.  
dayes, except it be Leape yeare, and  
then it hath 366. dayes.

A rule to know all the Vigils and fasting  
dayes throughout the whole yeare.

With mouable feasts I will begin,  
As Easter, Ascension, and Whitsontide,  
The Rogation weeke in like case,  
Must be kept as it commeth in place.  
And the Apostles, as Peter and Paul,  
Iames, Matthy, with other moe,  
Andrew, Mathew, and the rest as they fall,  
Bartholomew, Thomas, John Baptist also,  
Simon and Jude, and the Purification,  
the birth of Christ, and the Annuntiation,  
Ember, Fridayes, and Lent, as it doth come,  
the even of all Saints, and so we haue done.

A rule to know how many dayes every  
month in the yeare hath.

Thirtie dayes hath Nouember,  
April, June, and September,  
Februarie hath xxviii alone,  
and all the rest hath thirtie and one.

### Exception.

But when of Leape yeare commeth the time,  
Then dayes hath February twentic and nine.

# A declaration of the Tables last before mentioned.

If you desire at any time to know when it is full sea, or high water at any Port or Haven in England, or Wales or Ireland, or in any other part of the world.

If first by your own knowledg, or the knoledge of any expert Mariner, you know where you lie or moone in such part of the firmament, that the it is ful sea at such a port or haven, then these Tables shall be needless for you. But if you cannot so do, & would learne, then resort to these Tables, and first consider with your selfe, how many daies old the Moone is the day that you desire to know the tide.

And in the middle of the said Tables, you shall finde in the uppemost part of them this title, The age of the moone, and right against the day of the age of the Moone, you shall finde on both sides, the platters and points of the firmament, as south, south and by west, and south southwest, &c. And vnder the line are these letters H. m. which signifieth hours and minutes. Then having in memorie the age of the Moone as aforesaid, goe directly to the title of that place of the Firmament, to which when the Moone commeth, maketh high water, & there you shall finde the houre and minute when it is full sea in that place.

## Example:

I would know at what houre it will be a ful moon high water at London bridge, the 13. daye of December next, being in the yeare of our Lord 1588.

# For Ebbes and Flouds.

## Answere.

First resoyt yee to the former Table that teacheth you to know the age of the moone at al times, and by that rule you shall finde, that the xx. day of December next, the moone shall be 4. daies olde: then looke vpon the titles in the vppermost part of the aforesaid table, and among them you shal finde London.

And directly in the next vnder the same, you shall finde southwest, the which declareth, that when the moone is in the southwest, that then it is full sea at London bridge. Then go downe the line of the age of the moone vntill you come at the 4. day, and there you shall finde at the left hand of the same, directly vnder the line where southwest standeth, these figures 6. 12. which is six of the clocke and 12. minutes, at which time the aforesaid xx. day of December next, shall bee high water at London bridge.

And in the vppermost part of the aforesaid table I haue written the names of some ports, at which time the moone comming to the place causeth a full sea, and unto them yee may adde such other as you haue or shall haue any knowledge of.

A rule to know by heart what part of  
mans body is subject to any  
of the 12. signes.

The head and face doth Aries rule,  
as Taurus doth the necke:

But armes and hands in Geminies power  
doth suffer ioy or wreckes:

Cancer doth guide the brest, the lungen,  
the ribs and stomacke stont,

Leo likewise hath hart and backe,  
theroef yee need not doubt.

The belly and bowels Virgo hath,  
and eke the entrals all.

The loynes, the kidness and the rengnes,  
to Libraes lot doth fall.

The bladder and the secret parts,  
to Scorpio are the fees,

The thighs doth Sagittary guides,  
and Capricorne the knees.

The legs to Aquary belong,  
to use them as he lust.

But Pisces holdes the feote and heelas,  
and so for enarmest.

78 A Table shewing what signe the Moone is  
in and shall be for euer. and also what part  
of mans body every signe doth gouerne,  
with the infirmitie incident thereto.

| Moneths.  | Dates | Prime | The signes with the members<br>they gouern.            |

|           | 27    | 11,   |                                                        |

A declaration of the table that is on 79  
the other side, shewing at all  
times what signe the  
moone is in.

First, for the better vnderstanding thereof,  
note, that this Table is diuided into ffeue titles,  
that is to say, into moneths, daies, prime signes, &  
gouernment of the signes. Now if yee will know  
at any time; what signe the moone is in, you must  
first seeke out the said Table among the moneths,  
for the moneth wherein you desire to bee certiffied,  
and likewise among the title of the daies, for the  
day of the moneth that ye desire. And when ye haue  
found them, then begin at the moneth and tell the  
same for one day, and so goe forth vntil you come  
to the number of the daies that yee would haue,  
and note well what day the same doth end vpon,  
and keepe it in your memorie. Then seeke for the  
prime of that yere among the title of Primes, &  
accounting the prime for one, tell so many daies  
before you committed to memory and then on the  
right hand yee shal finde what signe the Moone is  
in, and what member of mans body it gouerneth,  
with the infirmities thereto pertaining.

Example,

I would know the eight day of December  
next, in the present yere of our Lord 1588.  
what signe the Moone will bee in. First Iooke  
in the aforesaid Table, and among the title of  
the moneths, and there I finde December, placed  
against the figure 4. which is the title of daies,  
and there I beginne to reckon, and call that

figure of 4. one, and so tell downward vntill I come to 8. and I finde that the same endeth vpon 11. which number I keepe in memorie. Then I seeke for the Prime of this yere, which 12. amog the title of Primes, and on the left side thereof standeth 11. and there I beginne againe, and call that 11. one and 10. go downeward, till I come to the number which I had kept in memory, which was 1. and on the right side thereof, I finde the signe to be Capricorne, which gouernes the knees, with his infirmities, Itching, red spots, leprosie.

A perfect easie, and ready rule to know  
in what signe the Moone is in  
euery day.

When y<sup>e</sup> know the age of the moone, double the same, and then diuide it by 5. and the quotient shall shew you how many signes ye shall adde to the signe that the coniunction was in, & the remaine euery unite thereof giueth 6. degrees, which ye must ad to the degree of the sunne, the day of if they passe 30. adde one signe, & the rest will shew the degree of the signe or very neare: but of the signe it will never faile to<sup>r</sup> surety.

Example.

This present 18. of October, the moone is 23. which doubled is 46. and diuided by 5. the quotient is 9. and 1. rest 1. that is 9. signs and 6. degrees, which I adde to the signe and degree of the coniunction(that is Virgo the 12. & it is 69.17.) and so of all others.

Cer-

Certaine elections that are to be chosen 81  
by the courie of the Moone, in any signe of the  
Zodiake. And first of blood letung.

**L**e<sup>t</sup> blood at no time without great cause, for it weakeneth and maketh way to many diseases: but if yee doo see it be after good digestion and fasting, in any temperate day, and afterward vse fine meates of light digestion, abstaining from all exercise, as bathing, watching, and carnall copulation. Next consider the time of the yere: if it be in the spring, let blood at the right side and in the haruest at the left. Thirdly the age of the person: for young persons, from the change to the first quarter, for them of middle age, from the first quarter to the full, and for elder persons, from the full to the last quarter, and for olde folke, from the last quarter to the change. Fourthly, consider the parties complexion. If it be chollerike, then let the moone be in ♀ or ♃. If he be flegmaticke, in ♈ or ♉. If he be melan, in ♊. the first part, or ♋. But if he be sanguine, let the moone be in any of the aforesaid signes, only beware you let not blood in any member when the Moone is in the signe that ruleth the same, neither the day of the change, nor the day before, nor the day after, in that were perillous.

The best times { by drinckes } Scorp.  
to purge, if that { by electu. } Lunain Can.  
time be temperat { by pilles. } Pisces.

To enter bathes for hot diseases Scorp. Can. Pisces.  
For cold diseases, Aries, Leo, Sagitt.  
To stop fluxes, Rewmes & Lareg. Taur. Vir. Capri.  
To take preparatiues, Aries, Leo, Sagit.  
To take vomits, Leo, Aries, Capri.  
To take gargarises, Aries, Cancer, Capri.  
To take Glissers, Libra, Scorpio.

Good to Attractine. ☽ ☽ ☽  
 comfort Retentine. ☽ the Moone ☽ ☽  
 the ver. Disgestine. ☽ in ☽ ☽

A description of these two Tables 83  
following.

These two Tables following, shall perfectly shew you the breake of the day, sun rising, length of the day and night artificiall, the setting of the sunne, and twilight for the whole yere, whereby ye may know the planetary houre, and what planet doth raigne any day or houre for euer: the vse is thus.

In the first colome looke for the moneth wherupon are descending or ascending, then in the next colome thereto, finding out the day, or the next thereto, & right there against toward the right hand if ye descend, ye shall finde the houre and minute of any of the aforesaid in the colome vnder the title thereof, but if ye ascend by the right side of the Table, then looke toward the left, and was before, the worke is easie, it needes no example atall: but because I promised to make it as plaine as might be, I wil shew an example suffici-  
ent and that is thus: The 22. day of September. I woulde know all that is aforesaid: I enter the Table descending by September, and finding the 22. day against the same in the colome vnder the title breake of the day, I finde 4.20. which shewes then at 4. of the clock 20. minutes is the breake of the day. In the next 6.18. which shewes the sunne rising, in the third colome 11. houres 24. minutes, the length of the day, and 12.36. in the fourth, the length of the night 5.42. i.e. the setting of the sunne, and 7.40. the twilight, or the going downe of the day light, and so of all other dates.

| Month. | Days. | Break of the day. | Sunrise rising. | Length of the day. |        | Length of the night. |       | Sunset setting | Twilight. | Days. | Months. |

January.

December.

85 A table to know what Planet rules every hour either of day or night for ever.

| Gouvernor<br>of the day.<br>of the day. | Sunday. | Monday. | Tuesday. | Wednesday. | Thursday. | Friday. | Saturday. | Ruler of<br>the night. |
|-----------------------------------------|---------|---------|----------|------------|-----------|---------|-----------|------------------------|
| Sol.                                    | 1       | 12      | 9        | 0          | 10        | 0       | 11        | Jupiter.               |
| Venus.                                  | 2       | 0       | 1        | 0          | 11        | 1       | 12        | Saturn.                |
| Mercury                                 | 3       | 0       | 11       | 1          | 12        | 2       | 0         | Sol.                   |
| Luna.                                   | 4       | 1       | 12       | 2          | 0         | 3       | 0         | Venus.                 |
| Saturne                                 | 5       | 2       | 0        | 3          | 0         | 4       | 1         | Mercury                |
| Jupiter.                                | 6       | 3       | 0        | 4          | 1         | 5       | 2         | Luna.                  |
| Mars.                                   | 7       | 4       | 1        | 5          | 3         | 6       | 2         | Saturne                |
| Sol                                     | 8       | 5       | 2        | 6          | 3         | 7       | 4         | Jupiter                |
| Venus.                                  | 9       | 6       | 3        | 7          | 4         | 8       | 5         | Mars.                  |
| Mercury                                 | 10      | 7       | 4        | 8          | 5         | 9       | 6         | Sol.                   |
| Luna.                                   | 11      | 8       | 5        | 9          | 6         | 10      | 7         | Venus.                 |
| Saturne.                                | 12      | 9       | 6        | 10         | 7         | 11      | 8         | Mercury                |
| Jupiter.                                | 0       | 10      | 7        | 11         | 8         | 12      | 9         | Luna.                  |
| Mars.                                   | 0       | 11      | 8        | 12         | 9         | 0       | 10        | Saturne                |

The vse of this Table is thus.

Under the day of ysur request, seeke the houre that ye desire, then on the left side, right there against, shall yee see the planet that governes that houre by day, and at the right side, the Planet that rules it by night, as thus. On Thursday the third houre of the day rules 0, and the 8 houre of the night governes 0, and so of the rest, for it is plaine enough.

# A table to know the length 87

of the Planetarye hourē, from the shortest day and longest night, till the Longest day and shortest night, of what length soever the day or night be.

| M. | O.    | 12.   | 24.   | 36.   | 48.   |

## The vse of this Table,

Show the length of the day or night that yee require by the table proceeding in hours and minutes, and therewith enter this Table, the hourē at the side, & the neerest minute at the head, and then descend right against your hourē, & there in the common angle, yee shall finde the hourē and minute, or minuts, onely that the Planet raignes by the hourē of the clockes.

As for example.

The 21. of June, the day is 16. hours, 20. min-  
utes, wherewith I enter this table as is shewed,  
and

¶ in the angle I finde 1. houre, 22. minuts, which sheweth that a planet that day rules an houre and a quarter and 7. minuts of the clocks. Also for the same night I finde it to be but 7. houres and 40. minutes, wherewith I enter this table with 7. at the side and 3 6. at the head (for that is the nearest) so in the common angle I finde but onely 38. minuts which shew that a planet in that night, rules but halfe an houre and 8. minutes of the clocks, and so of the rest.

A declararion of this Figure  
following.

**B**ut for more ease in account, I haue devised this figure following, which presently shall shew you the houre of the Planet by day or night at all times. The uttermost margin wherof, is deuided in 24. partes, representing the 24. houres of the Equinoctiall or clocks, which ever are of 60. minutes, and every houre is deuided into four parts, within the same haue you the houres artificiall, or houres of the Planets, as wel for the night as for the day, the Orizon line diuiding the same, which to the better knowledge is bedecked with shadowes, and all that is aboue the same is counted day because when the sun comes vpō the line in the East, it is day, for then begins the day artificiall: And when the sunne comes to the same in the West, he departs from our sight, & then beginnes the artificiall night. So likewise under the same is night, and therefore painted blacke in the center, wherein must be put a thred with a knot, or a small Beade to be remoued at pleasure.

The

The vse thereof is thus.

Know that the table for that purpose, ring of the sunne for the day yet desire, and vpon the same houre & interrest quarter, in the vextremest margin lay the thred, remouing vp and downe the knot or bead, till it lie vpon the orizon line, then holde it stedfast at the centre end, and moue your other hand unto the houre of the clock, cal ed the houre of the day, either before noon or after, then the knot among the planetis houres, shall shewe the iust houre of the artis dial, expresse the figures of Arctmetik, whereto vnder the Table of the Planetis, with the

day at the head, and so the number of the houre shall shewe you at the left side, the Planete that rules by day at the right side, the planet that rules the same houre by night.

## Example.

The xx. of October being Tuesday, I would know what Planet reignes at 3. of the clocke 30. minutes after noone. By the table of the sunne rising, I finde that the xx. day of October the lunne riseth at 7. of the clocke 15. minutes, which found in the figure, I put the thred thereto and set the knot on the oxiron, then remoue I the thred to 3. of the clocke 30. min. after noone in the margin, and the knot shewes the xi. houre of the artificiall day, wherewith I enter the table of planets vnder Tuesday, and right against xi. at the left side is 4. whch rules that present houre.

Againe at 5. of the clock at night, I would do the like, I remoue the thred to 5. in the margin and the knotte amongst the houres of the night, shewes the iij. houre of the artificiall night; wherewith I enter the table as before, and si d right against 5. at the right side . which rules hat present houre, &c.

This done if you desire to know how long the Planet of that houre hath ruled, or how long he shall rule, doe thus : set the thred to the time that yee desire to know the Planets houre, and if the knot light vpon the time that diuides the artificall houres, then , and at that instant beginnes the Planetary houre but if the knotte fall within the space, remoue your knotte to the line proceeding, then shall the thred in the margin shewe at what time the Planet be anne to raigne , then remoue the knotte to the linc following, and the thred in the margin will shewe you the instant of the clock when the Planet shall cease to rule

Whereof take this example.

Sunday the xviii. day of March the Sunne riseth at 5. of the clocke 3. minutes , and at 15. minutes past 9. of the clocke I finde by the aforesayde rules of th: Mōone to raigne at that instant,because the knot falleth in the middest betwene the lines, then set I the knotte backe to the line, and the threed falleth upon 20.min. after 8. then began Luna to raigne. Then remoue I the knot to the line following, and the threed doth marke in the margin 45. minutes past 9.of the clocke , and then doth the Mōone ende her dominion for that time,till her course returne, then take 8. o.out of 9. 45. and there restt 1.15. and so long raigned a Planet at that time.

### The properties and effects of the Planets.

Aturne is an enmy to humaine nature , a destroyer of life malevolent cold dry, earthly, masculine , of the day , the greater fortune of mans body , hec rules the right eare , the spleen & the b.acher , and the bones , of humors melancholye mixt

with sleame . of persons olde men , husbandmen , miners , masons , tanners , Jewes , envious persons , stubborne , solitary , still , leane , beardlesse , courteous , gluttons , deceiuers . Husbandry scences of the earth mines of mettals , treasures , but dings , heritage of the dead , possessionz , yisson , and hath of colours blacke . The g. earnde of his body is 91. times so big as the earth , the quantity of his beames are 9 degrees forward add backward . He makes his

reuolution or passeth thorow the Zodiacke in 30 yeares. His fewest yeares are 30. his meane 43. his greater 57. & his greatest are 465. yeares he is expressed in likenesse of an old man leaning on a stafe or holding a sticke in his hand, thus **H.**

Jupiter is the greater fortune of the day, hotte and moist, benivolent. He rules in mans body, the liner, lights and lungs, the ribs, the arteries, the blood, the seed, pulses, and the left eare. Of humours, the sanguine. He signifieth bishops, prelates, lawyers, judges, shamefast, gentle and humble, iust, honest, true, faithful, liberal, vertuous, and religious, gouernours of cities, & rich men, ecclesiasticall dignitie, religion, justice, honesty, praise. Of colours blewe, or tritaine. The greatnesse of his body is 95. times so much as the earth: the quanticie of his beames are nine degrees, hee ends his course in 12. years almost: his fewest yeares are 12. his meane yeares are 45. and a halfe, his greater yeares are 79. and his greatest yeares of all are 428. And to shew forth his three-folde thunderbolts, hee is expressed with three draughts thus **U.** which is not much unlike a Lance or scepter of honor, as some very fitte haue imagined.

Mars is the lesser infortunate, Masculine of the night, immoderately hotte and drye. Of mans body he gouerns the gall, the veynes, sinewes, bones and the left eare: of humours the chollerike: and of colours redde. He signifieth of persons the warriours, seditions, disdainefull, coniurers, or conspirers, trefull theives, cruell, bold, irreuerent, murtherers, Captaines, Chirurgians, Turkes, terrible, violent, carelesse, workers in fire workes, Gunners, and Founders, warre, strife, discention, tyranny, violence, armory, Alcuny, and all things wrought and done by the fire. The greatnesse of his body, is once as bigge as the earth, and halfe

bigge againe, and one eight part of the same. The quantitye of his beames are 8. degrees. Hee ends his course in 2. yeeres almost, his fewest yeeres are 15; his meane yeeres 40. and a halfe : his greater yeares are 66. and his greatest yeares are 264. and because he is the God of warre, he is exprest with a dart, thus .

Sol is the light and lamp of heauen, and giveth life naturall to all thinges, hee is an indifferent Planet moderately hotte and drie, masculin of the day, fortunate by aspect, but infortunate by coniunction. Hee rules of mans body, the haine, the marrow, the toyntes, the right eye of a man, and the left eye of a woman. Of colours, deepe yellow or golde colour. Hee signifieth Kings, princes, magistrates, famous persons, desirous of honour, and ambitious. Also Kingdomes, Empires, nobilitie, magnanimitie, fortitude, glory, rule, honor. The greatnessse of his body is 166. times so bigge as the earth, and somewhat more. The quantitye of his beames are 5. degrees. Hee passeth thorow the 12. signes in 365. dayes, and 6. houres, almoſt his fewest yeares are 19. his meane yeares are 69 and a halfe : his greater yeares are 120. and his greatest yeares are 146. and because he beares the image of Apollo, having a golden apple in his hand, therefore in that likenesse, or by a round circle, he is figured thus .

Venus is the lesser for me, femenine of the night, colde and moyle, temperate, benevolent. Of mans bodye, shee rules the chyrote, pappe, bellye, nine, matric, laines, fat, spleene, and the buttockes. Of humours, fume: of colours greene and whith: he signifies of persons the faire conditioned, mercifull, nice, the fine pleasant, and delightfull, the effeminate, louers, dancers, banqueters, physicians and Poets. Also stabilitye,

lollity, loue, mercy, beauty, gifts of friends and women, marriage, dowry, ornaments, jewels, lust, and lechery. The greatnessse of her body, is the 37. part of the earth. The quantity of her heames are 8. degrees. Shee endeth her course as doth the Sunne, her fewest yeares are 8. her meane yeares are 45. her greater yeares 82. and her greatest yeares are 151. And because she beareth two parts, one of Gold, and another of lead, she is express by a double drought thus & oz by a looking glasse which is more proper.

Mercurie is connertible, good with the good, and bad with the bad; sometime Masculine and of the daye, sometime Femenine, and of the night, hotte with the hotte, and colde with the colde, moist with the moist, and drye with the drye planets, as he is configured to aliy. He rules of mans body the mouth, the tongue, the thoughts, the membre, the hends, and the thighes. Hee signifieth of persons Philosophers, Sciuencers, Merchantes, Politiers, devisers of subtleties, craftye, deceiptfull, wauering, lyint, proud and scornewfull. Also all kinde of sciences, buying, selling, contracts, honest studis, devination, and curiositie. Of counte, the sate colour, or the speckled of maner colours. The greatnessse of his body is the 32000. part of the earth. The quarencye of his heames are 7. degrees. He makes his revolution in the Sunne and Venus. His fewest yeares are 20. his meane 48. his greater yeares 76. and his greatest yeares are 160. He is figured as it were wearing a hatte wth wings, thus & or else most properly by his charming rod that is inwironed with serpents.

Luna is naturally colde and moist, of the night Femenine, shee is the carier and deliuerer of the influence of all the Planets thorow her Oþre unto

16. She rules the left eye of a man, and the right eye of a woman, and of both, the stomacke, the iuste, the liver, the belly, and the left side. She signifieth noble women, widdowes, the vulgar sort, and those of continuall motion. as Marriners, Messengers, Legates and vagabonds. Also all things that abound in moysture, the sea, the ryvers, with their ebs and floods, the studies of histories, Embassages, Navigation, tournyng, service, planting, sowing, and al water woxes. Of humours the fleame, of colours, white or siluer colour. The greatness of her body, is þ 39. part of the earth. The quantity of her heimes are 12. degrees: she makes her passage through the Zodiacke in 29. dayes, and 12. houres, or there about. Her felwest yeares are 25. her meane yeares are 66. and a halfe, her greate yeares are 108. & her greatest yeares are 520. and because she is commonly seene horned, or halfe round, she is figured thus C.

The Dragons head, ( which is the intersection made by the cutting or crossing lines of the Dibes of the Sunne or Moone ) is good with the good, and badde with the badde, for if it be ioyned with good Planets, it augmenteth their goodnessse, and enioyned with the euill, it dooth increase the malice and euill nature of them, and is figured thus ⚡.

The Dragons tayle, which as it is the opposite point to the head, so it is contrary in nature, for with the good it is bad, and with the bad it is good, for with whomsoever it is ioyned it dooth diminish the operation of them, be it good or bad, and is expressed thus ⚤.

The names of the Colledges and Halles,
